

Independent software engineer shipping local-first products end to end: an Electron screen recorder with deep Wayland/Linux systems work, agent-orchestration plugins in Python, full-stack web apps in TypeScript, and a native iOS client in Swift. Six published open-source tools and an active stream of upstream pull requests in the Hermes Agent ecosystem.

SELECTED PROJECTS

ScreenPolish Creator · Windows & Linux desktop app source private

- Built a cross-platform screen recorder that automatically polishes recordings: auto-zoom on click clusters, a redrawn smooth cursor with click ripples, gradient frames, webcam bubble, and MP4/GIF export — fully local, recordings never leave the machine.
 - Engineered the Linux/Wayland port without a global input hook: pointer path reconstructed from Hyprland's IPC socket, clicks from evdev (keyboard deliberately never read), capture via xdg-desktop-portal and PipeWire.
 - Designed every effect as a pure function of (frame, events, settings) so preview and export share one renderer; packaged with electron-builder for NSIS, ApplImage, and pacman, with a JSON-output CLI made for AI agents.
- Electron · React 19 · TypeScript · Tailwind 4 · WebCodecs · FFmpeg

Hermes Bot Forge Creator · open source (MIT) github.com/BkashJEE/hermes-bot-forge

- Published a plugin for Nous Research's Hermes Agent that turns one sentence into a complete working bot: generated identity, purpose-written SOUL.md, seeded memory, tools, cron routines, and a login gateway service.
 - Every provisioning step is verified with full rollback on failure; installable in one command from the Hermes plugin registry.
- Python · pytest · systemd

Hermes X Mission Control Creator · full-stack web app source private

- Built a local-first content operating system for X with thirteen destinations (pipeline, calendar, analytics, content graph) where named agent profiles hand work through a research → draft → verify pipeline with receipts, gated by owner review.
 - Implemented a Supabase backend with row-level security and SQLite fallback, plus fail-closed research intake with host allowlists.
- Next.js · TypeScript · Supabase · SQLite · zod

PUBLISHED TOOLS

Hermes Agent Dock (42★ on GitHub) — native Hermes Desktop dock — profile chat, concurrent jobs, Kanban assignment (Python)
Repo Shelf (17★ on GitHub) — git repositories as books on a 3D bookshelf (TypeScript)
Codex Usage Meter (4★ on GitHub) — privacy-first usage meter with verified updates (Python)
Hermex (1★ on GitHub) — native iPhone app for Hermes Agent (Swift)

OPEN SOURCE & EXPERIMENTS

Ten-plus open pull requests to NousResearch/hermes-agent — desktop features, performance, and reliability, e.g. #113268 perf(desktop): stop the empty-pane decode looping at idle; #113249 fix(tui_gateway): keep peer-less broadcasts out of stdout; #101951 feat(desktop): global HUD summon. Plus six desktop experiments for the Omarchy/Hyprland shell in QML and Python.

SKILLS

Languages	TypeScript, JavaScript, Python, Swift, SQL, QML/Qt, Bash
Web	React 19, Next.js, Tailwind CSS, Vite, Supabase
Desktop & systems	Electron, WebCodecs, FFmpeg, Wayland/Hyprland, PipeWire, evdev, systemd, Arch Linux
AI & agents	Hermes Agent plugins, multi-agent orchestration, Claude Code, agent-friendly CLI design
Practice	Vitest, pytest, Playwright, GitHub Actions, PR-based workflow
